

# Welcome to a new world of human-robot coexistence.

Issues of installation and setup time, space and cost have hindered the introduction of industrial robots. Kawasaki set out to develop a radically new type of industrial robot that overcomes these challenges.

The result is the duAro, a dual-arm SCARA robot.

It is small enough to fit into the space of just one person, enabling it to work alongside humans.

The robot comes with a user-friendly special tablet device for teaching it to perform new tasks.

The controller is housed inside a wheeled platform, so the duAro can be easily moved to where it is needed.

This feature gives the robot the flexibility needed to respond to frequent changes in production lines.

Get ready for the start of a new robot revolution.
