

Multifunctional Controller for Construction Machinery

KC-MC-20

Use of KC-MC-20 can significantly reduces fuel consumption during excavator operation

The use of a new control system, such as improved computing power through the use of dual microcomputers, has resulted in a 15% reduction in fuel consumption during excavator operation compared to previous products.

fuel consumption
during excavator operation

Using the latest control technology, fuel consumption during excavator operation was reduced by 15%.

Product Description

KC-MC-20 is compatible with the new hydraulic system for excavators and supports advanced control.

Features

- Significant increase in proportional solenoid valve output channel
- Electric Joystick Input Supported(CAN/PWM)
- Compliance with the RoHS Directive and REACH regulations
